What is Jama?

Modernize Your Requirements Management With Jama

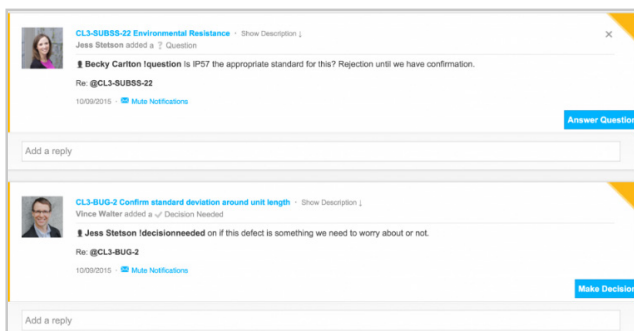

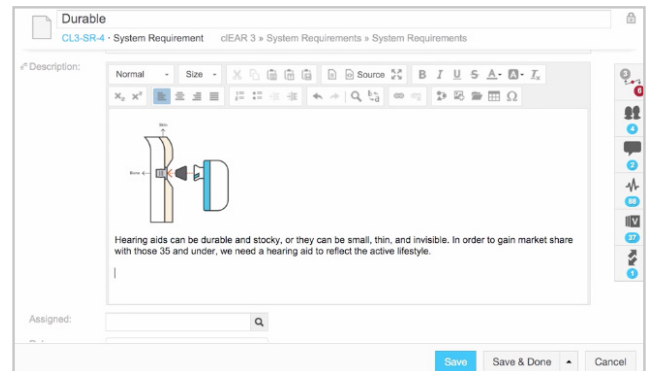

Jama is software for better, faster requirements definition, management, verification and validation, from inception to production. Systems engineering teams developing life and economy-critical products use Jama to innovate against the constraints of highly complex environments and release with confidence.

- Remove the overhead of requirements reviews.
- Shorten the time between milestones.
- Mitigate risk and maintain traceability evidence.
- Visualize connections between regulations, requirements and test cases.

Requirements Management

Author requirements and create cross-team review groups with a sophisticated requirements management solution that removes the overhead of preparing content for a review.

- Prioritize requirements validation, problem statements, engineering responses, negotiation and reviews.
- Share robust, contextual information about your specs.
- Orchestrate work across multiple teams delivering a single complex product.

Real-Time Collaboration

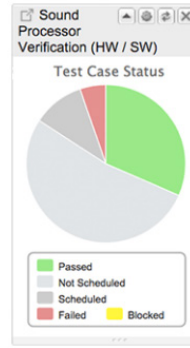

Shorten milestone phases, improve efficiency, identify risk and find opportunities to innovate with purposeful collaboration.

- Coordinate stakeholders, engineers, partners, data, conversations and decisions.
- Unlock valuable product information from documents and email.
- Store work in progress and archives in the same place for ongoing iteration, real-time reporting and clarity across the organization.

Validation, Verification and Test

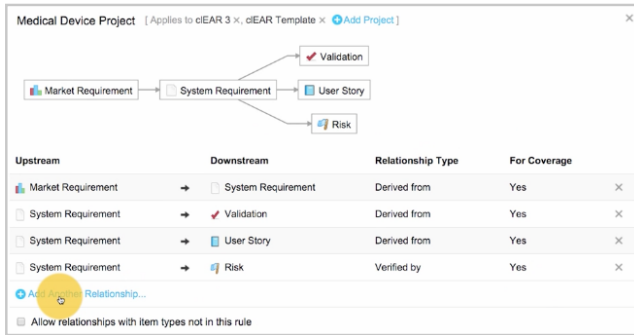

Maintain traceability evidence with Jama's requirements management solution to visually confirm every requirement, system and component spec has been tested.

- Configure and customize your traceability structure.
- Create, maintain and relate test cases, and validate and verify product specs in one place.
- Create relationships between, and manage the configuration of, engineering design and requirements.

ID	Name	Risk Status
CL3-RISK-1	Bacterial infection	Mitigated
CL3-RISK-2	Implant doesn't integrate w ...	Mitigated
CL3-RISK-3	Implant doesn't integrate w ...	Analysis
CL3-RISK-4	Loss of osseointegrated fx ...	Draft

ID	Name	Status
CL3-SR-6	SymbianOS Integration	Rejected
CL3-SR-5	Haptic Feedback	Draft
CL3-SR-9	Hearing Gain in Free Fiel ...	Draft
CL3-SR-10	Suprathreshold Speech P	Approved

End-to-End Traceability

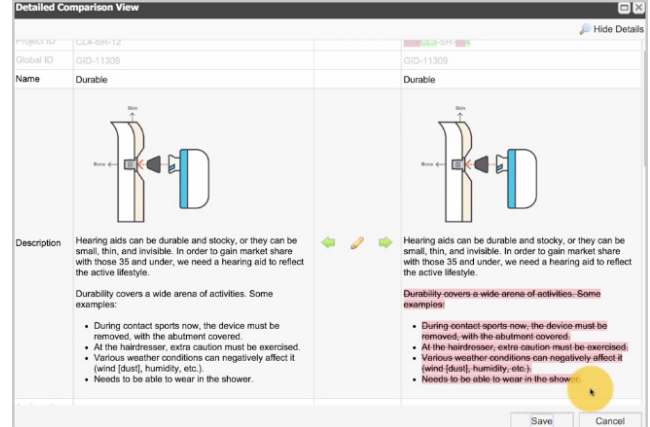

Easily show connections between requirements, specifications and tests, as well as related changes and discussions, so teams can see the impact and validation of changes.

- Visualize relationship rules and understand the impact of upstream changes.
- Identify gaps in test coverage and flag suspect links.
- Capture decisions, answer questions and resolve issues transparently and responsively.

Product Variants

Jama requirements management software lets you structure product variants from requirements for accelerated new product development.

- Easily define and manage alternative data in parallel, and compare versions.
- Develop branch releases and variants simultaneously.
- Reuse entire IP blocks, or update specs, across product lines.
- Create a searchable, centralized IP library.

About Jama Software

Jama Software is the definitive system of record and action for product development. The company's modern requirements and test management solution helps enterprises accelerate development time, mitigate risk, slash complexity and verify regulatory compliance. More than 650 product-centric organizations, including NASA, Rockwell Collins, Boeing and Caterpillar use Jama to modernize their process for bringing complex products to market. The company is headquartered in Portland, Oregon. For more information, visit www.jamasoftware.com.
