The Agile Mindset

Disclaimer: This provocative presentation is ideally the beginning of a conversation. It won't take long for me to tell you everything I know about cognitive psychology, although I have been reading in the area for several years now. I'm an amateur who has sufficient interest in weird topics and a strange way of connecting ideas that might or might not be of interest to you. Thank you for your tolerance and understanding of my meanderings and I hope you learn a little that might help you in your life.

This is not an “academic” presentation, but those interested in more information are invited to ask me for references for any part of this talk and I will be happy to make them available.
Do you mostly agree or mostly disagree with the following:

Intelligence is something very basic that you really can't change much. You’re born with it or not. Yes, you can learn new things, but you can't really change how intelligent you are.

No matter how intelligent you are, you can always get better, sometimes you can improve a lot.

You can substitute any ability or talent for “intelligence.”
Interesting experiments

Phase I:
Students were given a very easy set of questions

Then they were categorized into “effort” or “smart” groups (about 50-50)
Phase II

All students allowed to choose between:
(1) a more difficult test (where they would learn a lot) or
(2) another easy test (similar to Phase I)

Most (~90%) “effort” kids chose (1)
Most (~80%) “smart” kids chose (2)
Phase III

Very difficult exam given to both groups
“Effort” kids worked hard, enjoyed the challenge
“Smart” kids easily discouraged
Phase IV

All students allowed to choose between:
(1) seeing exams of those who did better
or
(2) exams of those who did worse

“Effort” kids chose (1)
“Smart” kids chose (2)
Phase V

All students given easy test (similar to Phase I)

“Effort” kids improved (by ~30%)

“Smart” kids’ were worse (by ~20%)
Phase VI

All students asked to give advice to other students and include their scores

“Effort” kids: Lots of advice and encouragement.

“Smart” kids: Very little or no advice and ~40% lied about their scores
Mindset – Carol Dweck

“Everyone should own this book.”

Two mindsets: Fixed & Agile

Research shows that mindset:
Determines goals
Reactions to failure
Belief about effort and strategies
Attitudes toward others’ successes
### Two mindsets
**Fixed vs. Agile**

<table>
<thead>
<tr>
<th>Fixed Mindset</th>
<th>Agile Mindset</th>
</tr>
</thead>
<tbody>
<tr>
<td>Ability – static, like height</td>
<td>Ability – can grow, like muscle</td>
</tr>
<tr>
<td>Goal - look good</td>
<td>Goal - to learn</td>
</tr>
<tr>
<td>Challenge - avoid</td>
<td>Challenge - embrace</td>
</tr>
<tr>
<td>Failure - defines your identity</td>
<td>Failure – provides information</td>
</tr>
<tr>
<td>Effort - for those with no talent</td>
<td>Effort - path to mastery</td>
</tr>
<tr>
<td>Reaction to challenge - helplessness</td>
<td>Reaction to challenge – resilience</td>
</tr>
</tbody>
</table>
Mindsets in an MRI
Belief about yourself affects belief about others

Those with a fixed mindset are quick to judge others based on little information and quick to stereotype.

Those with an agile mindset don’t ignore information about others but are less negative/positive.
Bright little girls
Bright little boys
Organizations have a mindset

Amy Edmondson, Harvard Business School, studied how hospitals implemented a new technique for open-heart surgery.

Those who were successful saw a steep learning curve and realized it would be challenging, but worth it for quicker, easier patient. Those who were not successful saw the change as “cool” new technology, a marketing opportunity, a way to show other hospitals that they “had it.”
Smartest guys in the room
Enron’s fixed mindset

Identify and hire “the best talent”
Then continuously and ruthlessly grade, sort, fire, and promote – a process called “rank and yank”
We are a company of people, not planes. That is what distinguishes us from other airlines.

Fly Southwest Airlines because you want to be treated like a person.
The Southwest Culture

Hire for attitude

Establish a culture of community, trust, and the “Southwest spirit”

Then provide learning opportunities and continually grow people

Southwest seems to have an “agile” mindset
Managers have a mindset

Hard Facts – Pfeffer & Sutton
http://www.evidence-basedmanagement.com/books/
Agile organizations

Scott Forstall, senior vice president of Apple in charge of iPhone software – “to make mistakes and struggle, but eventually we may do something that we’ll remember the rest of our lives.”

David Kelley, IDEO’s founder and chairman: We like our people to fail early and fail often.

Amazon’s Jeff Bezos says his company’s strategy is like planting seeds, or going down blind alleys.
The good news is…

Mindset is not “fixed”
We encourage one or the other in each other
We develop one or the other in our children
Research has shown that small experimental manipulations, e.g. feedback or reading an article can produce one or the other
You mean I don’t have to be stupid?
Effort is good!

Praise effort, strategies, process
Ask about the work
Instead of ignoring failure, teach others that it’s a way to learn and improve
Agile software development

Fail early, fail often.
Fail fast, learn constantly.
Failure *IS* an option.
Without failure how can learning happen?
Perfect is a verb.
Better estimations!

Typically we tend to overestimate our performance, even in the face of data from previous deliveries. Research shows that those with a fixed mindset are more prone to this tendency than agile thinkers.
Agile is agile

The agile mindset believes that we are *ALL* a work in progress.

The agile software development process isn’t fixed. It continues to change and grow as we learn more about it. If we are lucky, this will never end because it will never be perfect.

We will continue to improve as we age—just like me 😊!

Try again. Fail again. Fail better.

Thanks for listening!
